### Frontend Developer & Designer
Pinax, Montreal - October 2021 to present

Design, conception and production of web solutions for the blockchain.

- Tools to facilitate business growth
- Advice on product strategy
- Management of interns and a community of practice discussing Frontend
- Design and development of the company's main website and their cloud platform
- Development of a blockchain data analysis platform

### Co-Founder & CTO
Oreus, Montreal - June 2021 to December 2022 ( 1 year & 7 months )

Design of web products, from ideation to deployment of the solution. We worked with a mortgage brokerage partner to design a modern toolkit for brokers and their clients.

- Advice on product strategy
- Production of user-flows, website mockups and various vector assets
- Development of a document management solution (Next.js, SASS, Express, PostgreSQL, Auth0)

### Lead Developer
Fanslab, Montreal - September 2020 to June 2021 ( 10 months )

Thanks to my skills, great motivation and advice, the company was prepared for its growth, I was promoted to lead developer.

- Participation in the hiring process (interviews and evaluation of candidates)
- Implementation of tools promoting growth (Confluence, Jira, Slack)
- Redaction of quality documentation for the integration of new employees
- Coordination of the development team (as scrum master)
- Advice on product direction

### Full Stack Developer
Fanslab, Montreal - July to September 2020 ( 3 months )

Development of a private community platform integrating a news feed, live video (with discussion thread), video chat rooms, and more.

- Development of the main features of the platform in 4 weeks
- Use of React, Redux, SASS and external APIs
- Design of adaptive designs (Responsive Designs)

### Full Stack Developer
Kontron, Boisbriand - January 2019 to April 2020 ( 1 year & 4 months )

Development of several web applications allowing the company to innovate, to fully understand customer needs and to analyze the performance of work teams.

- Development of web applications with React, Firebase and the JIRA API
- Development of a JIRA application
- Design of a web tool for the management of IP addresses

### Full Stack Developer (Intern)
Cactusoft, Laval - September to December 2017 ( 4 months )

With a young, dynamic and friendly team, I worked on the development of a display application and configuration of commercial displays.

- Deep learning of GIT
- Design and implementation of user onboarding flow
- Use of the Atlassian suite (Jira, Confluence) and Teamcity
- Web application development with Angular 4, Firebase, Node.js and NPM
